What will JTL do for you?

Choose JTL and have the reassurance of working with one of the best training providers in the country.

We deliver more Advanced Apprenticeships than anyone else in the building services engineering sector, working with over 9,700 apprentices and 3,500 employers.

We are one of the top three work based learning providers in the country. Our funding comes from the Government which enables us to pay for all your off-site training.

We are a charity and were set up by the industry for the industry.

But the best reason to choose us is that you are really likely to be successful. 70% of people who start an Advanced Apprenticeship with JTL will complete it. That's compared to a national average of just 50%. That's partly because we only accept the best candidates – only one person in ten who applies will be successful – and partly because when you do start your apprenticeship, we're there to help and support you every step of the way.

Visit www.jtltraining.com to see some real stories about being a JTL apprentice.

What an apprenticeship is really like?

"My Training Office Dave was fantastic and so was my mentor at work Bob. They were really supportive and made sure I got the best out of my training. Long term, I'd be interested in working abroad – maybe Australia or New Zealand."

Danielle Former JTL apprentice

"I've got friends who are electricians and it seemed like a good path to follow. You do get a real sense of achievement in your work. This apprenticeship gives me the theory and the practical skills and my plan is to work my way up through the firm and climb the ladder to get where I want to go."

Simon JTL apprentice

"Some of the things I enjoy most are that I'm always working somewhere different and that I get to see lots of different sides of the job. Later on I'd like to carry on and study more so I can specialise in an area that interests me most."

Diego Former JTL apprentice

"There is a lot to learn and, because I worked for a small business I got to see every aspect of how things are run. I'm hoping to take over the business myself in the future and in the meantime we're definitely planning to take on more apprentices to build up the business."

Mathew Former JTL apprentice

ADVANCED APPRENTICESHIP IN **PLUMBING**

PLUMBING

What's next?

If you're smart and think you have the drive and the ambition to make a success of a career in plumbing, we want to hear from you.

IS IT 4 ME?

First take the online Is It 4 Me quiz to decide if it is the career for you.

You can speak to a Careers/Connexions Advisor and ask for an Application Form. Or find out more and apply online at www.jtltraining.com, email enquiries@jtltraining.com or call 0800 0852 308.

JTL ASSESSMENT

We will contact you to ask you to attend a JTL Assessment with us. Remember, a colour blindness test must be taken to ensure your eligibility.

COLOUR BLINDNESS

If you can demonstrate that you have the capability to succeed in your apprenticeship, you will be added to our Approved Candidate List, which is sent to local employers. If you are invited to an interview, your Training Officer will give advice on the best way to approach it. However, we cannot guarantee to find an employer and, to improve your chances, you must start looking straight away.

APPROVED APPLICANT

If you are offered a job, your Training Officer will organise your off-site training at a local college, and will ensure the employer continues to meet our quality standards.

Throughout the four year Advanced Apprenticeship, your JTL Training Officer will be there to provide support and guidance at every step of the way.

It's challenging. It's hard work. It's rewarding. If it's you – get in touch.

DELIVERING SKILLS FOR YOUNG PEOPLE

Turn it on

JTL
DELIVERING SKILLS FOR YOUNG PEOPLE

A JTL Apprenticeship. Your road to success.

An Advanced Apprenticeship is your first step to an amazingly rewarding career where you'll earn while you learn – rather than getting into debt at university.

Once you've qualified you could gain experience working on exciting projects like an Olympic stadium or an international airport and end up running the show. You could choose to study further in a specialist area and find yourself leading the field. Scale the heights on a challenging project abroad. Or be the boss in the future by setting up your own successful business.

Your apprenticeship with JTL can take you there.

Visit www.jtltraining.com to get things started.

What does a plumber do?

There's more to plumbing than leaky taps. As a qualified plumber you could be installing heating systems in individual homes or working as part of a team on huge construction projects like leisure centres or airports.

You could be working on maintaining essential water supplies to a hospital, checking out underground drainage systems or working on an oil rig, cruise liner or air craft.

You'll need to be able to work with little or no supervision, to develop good working relations with customers and colleagues and have an excellent technical understanding of your field.

The four parts of an Advanced Apprenticeship

An Advanced Apprenticeship is a challenging option and is the academic equivalent of two A Levels. You'll have to combine a good practical grasp of your subject with a thorough technical understanding. Your progress will be reviewed regularly and you will be pushed hard to achieve your full potential.

NVQ

An NVQ is like the practical part of a driving test. It is a way of testing your practical on-the-job skills that you need in the workplace. As you progress you will build up a portfolio of evidence which shows you have the skills to do the job and you will be assessed on-site by your Training Officer.

TECHNICAL CERTIFICATE

A Technical Certificate demonstrates the theory side of the 'driving test.' You'll study at college and be tested on your theoretical knowledge of your job.

KEY SKILLS

Key Skills are part of your college programme and focus on literacy, numeracy and life skills to help you deal with customers.

INDUSTRY QUALIFICATION

Lastly, an Industry Requirement is a Corgi gas qualification and various additional tests.

How does it work?

You'll find a job with a local company where you'll spend most of your time receiving practical experience on-site, and the rest at college studying the theory.

You'll receive a salary from day one and benefit from all the status that employment brings. The JTL Apprenticeship lasts four years and you'll receive a national recognised qualification – an NVQ (up to Level 3). All your hard work will mean you're a fully qualified plumber.

With you every step of the way

Our 185 Training Officers are at the heart of what we do for you.

Your Training Officer will ensure you continue to make progress throughout your four year apprenticeship and mentor you through every stage.

They will liaise with you, your employer and your college to make sure you achieve your final goal – an Advanced Apprenticeship which includes an NVQ.

As qualified experienced industry experts, our Training Officers understand what it takes to make a success of your choice. They are firmly on your side and want to provide you with long term career opportunities and support you in every way possible as you work towards a rewarding career.
